Re: Mrs Rachel Brown, DOB: 12th December 1943

Dear Ms Fiona Mckie,

I am writing regarding Mrs Brown, who was admitted to our hospital due to an infected venous ulcer on her left leg. She is scheduled to be discharge today and now requires ongoing care and monitoring.

Having developed a discoloured and swollen wound on her left leg, Mrs Brown was admitted to our hospital on 16th August, resulting in her being diagnosed with the aforementioned condition. After being treated accordingly with effective wound, pain and infection management, she has responded well to the treatment. Although she was confused on admission, she is alert and aware at present and has made good progress.

Regarding Mrs Brown's background, having hypercholesterolemia and being hypertensive, she currently takes Lipitor and verapamil. Despite not being supported by a social worker, she receives regular visits from her supportive daughter, who lives nearby.

In view of the above, it would be greatly appreciated if you could provide Ms Brown with ongoing monitoring, care, and support. Please monitor her medication compliance and healing, provide help with her ADLs, and change her dressings daily with cadomexer iodine and triamcinolone ointment. Kindly note that she has been advised to lose weight, due to which a referral to a dietician might be required to reduce the possibility of her ulcer reoccurring. Additionally, she has also been informed about compression stockings, bed rest, and the elevation of her leg. In addition to taking paracetamol for one week, Ms Brown also needs to be continued with oxacillin, IM, 300 mg, every 4 to 6 hours a day. Lastly, she will have a progress review on 25th August at the Community Clinic.

If you have any questions, please do not hesitate to contact me.

Yours sincerely,

Nurse
